Renaissance Cosmetic Laser Named Artefill Center of Excellence

(Oak Brook IL) Renaissance Cosmetic Laser (RCL) has been named an Artefill®* Center of Excellence by Suneva Medical, the manufacturer of Artefill. RCL is one of only two centers in Illinois and one of 50 in the country.

“We are pleased to offer our clients the latest in dermal fillers. Artefill is the first and only FDA-approved microsphere-enhanced collagen filler with results that last for five-seven years,” said Taek Kim, M.D., RCL’s medical director.

“Artefill stimulates your own collagen production because the microspheres in Artefill are not absorbed by the body,” Dr. Kim said. “You may actually look even better several years after you received the filler. Other temporary dermal fillers are made of different kinds of natural or synthetic materials that are completely absorbed by the body over time and require frequent injections to maintain wrinkle correction.”

Artefill is administered as a simple, in-office treatment with immediate results. It is especially effective on smile lines because of its potency and staying power. It may also be used elsewhere that you desire volume, wrinkle correction or contouring, said Dr. Kim, who is one of only two doctors in Illinois trained to administer Artefill.

Dr. Kim is a cosmetic surgeon and board-certified gynecologist who offers body contouring through liposuction, breast augmentation, facial rejuvenation through non-surgical facelifts and fillers such as Artefill, cosmetic gynecological procedures such as incontinence treatment and vaginal rejuvenation and endovenous laser vein occlusion treatment for varicose veins. All procedures are performed under local anesthesia, which reduces cost and downtime.
